

Circular Electronics Initiative: what it brings in relation to WEEE

Presentation by Maria Banti

DG Environment

European Commission

ReWEEE – Final webinar,
9 and 12 November 2020

A new vision for Europe

35 actions along the entire life cycle of products, to:

- Make **sustainable products** the norm in the EU
- **Empower** consumers and public buyers
- **Focus also on key product value chains:** **electronics and ICT**; batteries and vehicles; packaging; plastics; textiles; construction and buildings; food; water and nutrients
- Ensure **less waste**
- Make circularity work for **people, regions** and **cities**
- **Lead global efforts** on circular economy

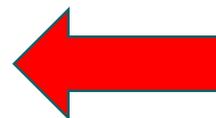

Key product value chains

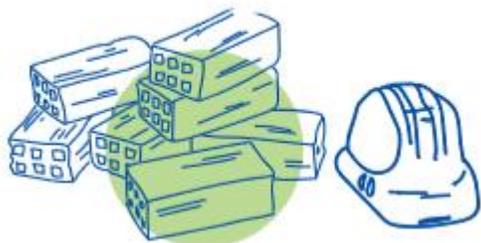

Food, water & nutrients

Electronics and ICT

Batteries & vehicles

Construction & buildings

Packaging

Textiles

Plastics

WHY electronics and ICT?

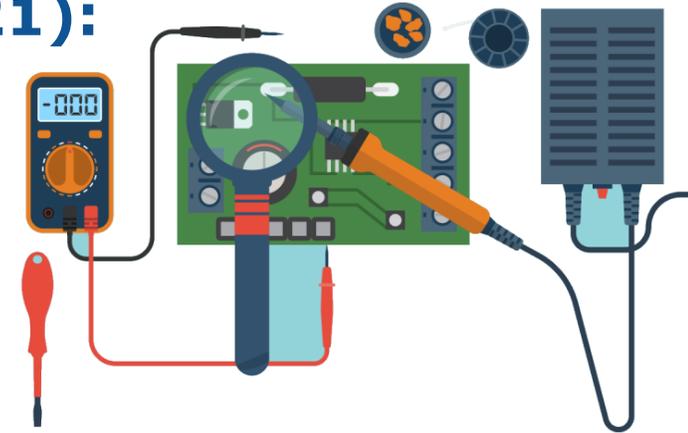

- **Increasing production and sale of smartphones:**
 - Expected to grow by **28%** from 2020 to 2025
 - Accounts for up to **80%** of the devices lifecycle GHG emissions, not their actual use
 - Increasing the lifespan of all smartphones in the EU by 1 year would reduce emissions equivalent to taking 1 million cars of the roads
- **Growing electronic waste (e-waste):**
 - One of the **fastest growing** waste streams (Europe is 1st worldwide per capita)
 - Less than **42%** of electronics are currently being **recycled** in the EU
 - Around **€55 billion** in materials are **lost** globally every year (€12Bn in the EU)
- **Europeans want it (Eurobarometer March 2020):**
 - **64%** of Europeans would like to use their phone for at least **5 years**
 - **79%** thinks that manufacturers should be **required** to make it **easier to repair** digital devices or replace their individual parts
- **Limited legislation** is currently in place to address these challenges and improve the circularity of ICT products.

The Circular Electronics Initiative

- **The Circular Electronics Initiative aims to (by 2021):**

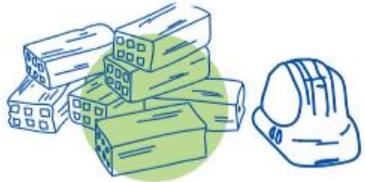

- **Extend the lifespan** of electronic devices
- Prevent **premature obsolescence**
- Promote **repair, recycling** and efficient use of **resources**

- **This could be achieved through:**

- **Design requirements** (e.g. durability, modularity, repairability, recyclability)
- **Information requirements** (e.g. repair manuals, source code, components/materials, availability of spare parts, tools, environmental footprint)
- Requirements on **spare parts** (e.g. production/supply, licensing)
- **A Right to Repair** (for consumers/users and 3rd party repairers)
- **Take-back schemes** and **common charger** standards

Key product value chains: Electronics and ICT

Circular Electronics Initiative

- Regulatory measures including mobile phones, tablets and laptops under the Ecodesign Directive
- Implementing the new “right to repair” and update obsolete software
- Introducing a common charger
- Explore EU-wide take back schemes to return or sell old mobile phones, tablets, laptops & chargers
- Restrictions of hazardous substances in electrical & electronic equipment

Circular Electronics Initiative

- **Regulatory measures including mobile phones, tablets and laptops under the Ecodesign Directive**
 - designed for energy efficiency and durability, reparability, upgradability, maintenance, reuse and recycling
 - Preparatory studies (End of 2020 / Beginning of 2021)
 - Legislative proposals (public consultation : spring 2021)

Circular Electronics Initiative

- **Implementing the new “right to repair” and update obsolete software**
 - Consumers should have a strong “right to repair”
 - It requires both supply-side requirements on producers and a demand-side consumer right, which is enforceable and enforced
 - The Commission is working on developing a comprehensive range of options from **three angles**:
 - ✓ Consumers should be in the position to choose repairable (and durable) products and access affordable and consumer friendly repair services;
 - ✓ Products need to be designed and made to be repairable;
 - ✓ Further development of producer responsibility schemes should promote repair operations.

Circular Electronics Initiative

- **Implementing the new “right to repair” and update obsolete software**
 - The Commission is working on these three angles in several initiatives under development, most notably:
 - ✓ The initiative ‘Empowering Consumers in the Green Transition’
 - ✓ The ‘Sustainable Products Initiative’
 - ✓ The ‘Circular Devices Initiative’

Circular Electronics Initiative

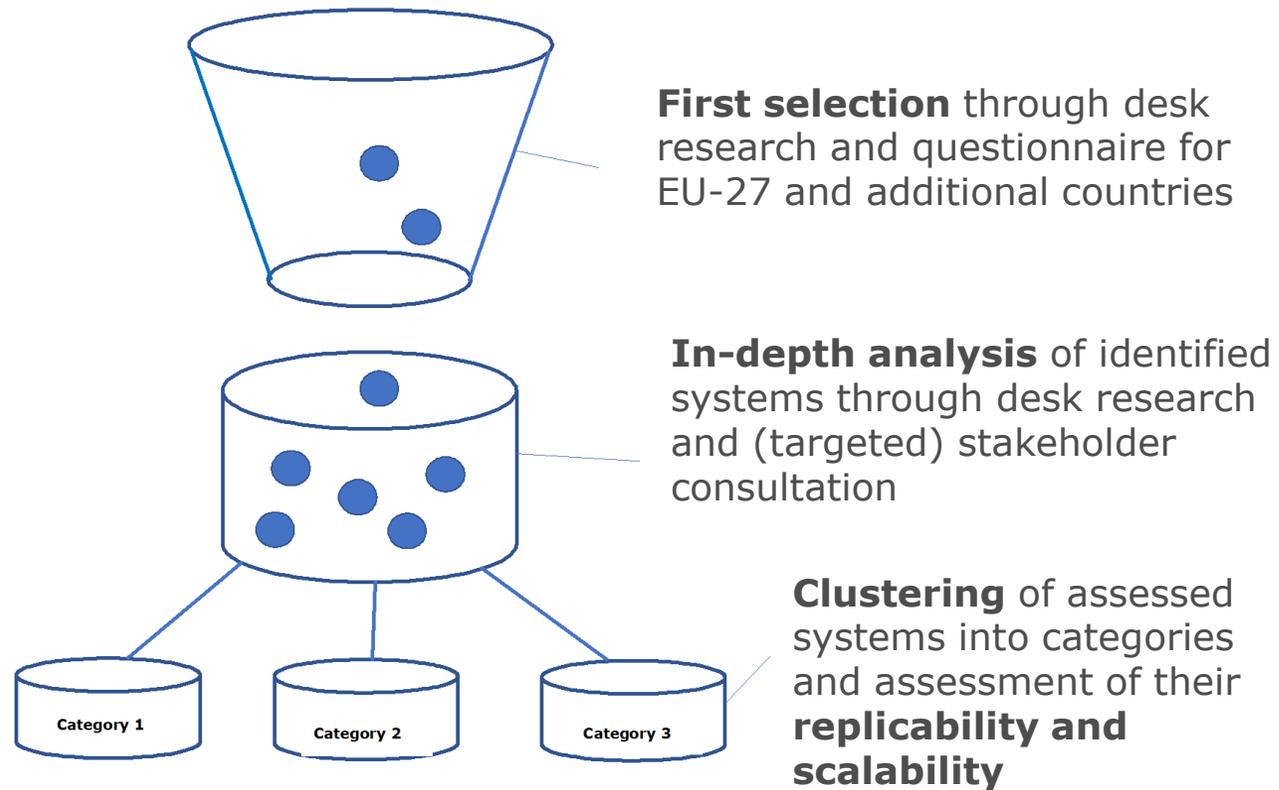

- **Introducing a common charger**

- Regulatory measures on chargers for mobile phones and similar devices, including
 - the introduction of a common charger,
 - improving the durability of charging cables, and
 - incentives to decouple the purchase of chargers from the purchase of new devices.

Circular Electronics Initiative

- **Explore EU-wide take back scheme to return or resell old phones, tablets, laptops & chargers**
 - Study on options for EU-wide return schemes of mobile phones, tablets and other small electrical and electronic equipment (June 2020-March 2021)
 - Objectives of the study:
 - ✓ to provide the Commission with assessments of the challenges and opportunities of collecting small EEE and WEEE for subsequent reuse, repair, recovery and recycling,
 - ✓ to present an overview of the different types of return schemes across the EU,
 - ✓ to provide recommendations on possible EU action.

Identification and typology of existing return and reward systems and other measures

Circular Electronics Initiative

- **Restrictions of hazardous substances in electrical & electronic equipment**
 - review of EU rules on restrictions of hazardous substances in electrical and electronic equipment
 - guidance to improve coherence with relevant legislation, including REACH and Ecodesign

HOW

- **Preparatory studies**

- Several studies pending to assess **new eco-design measures** for phones, tablets, laptops + IoT/edge and other electronic devices (incl. software)
- Ongoing studies on extending **consumer protection** legislation on horizontal rights to information/transparency and repair

- **Legislative actions (through existing or new instruments)**

- New minimum **design requirements** for ICT devices (e.g. phones, tablets and laptops): Implementing measures (current Ecodesign Directive)
- Enable measures beyond design requirements (e.g. **right to repair**): TBD – possibly via consumer protection legislation
- **Common Charger** (decoupling, collection): delegated act

- **Non-legislative actions**

- **Take-back scheme** (TBD)
- Capacity building (e.g. after-markets, repair/recycling)
- Improved consumer information (e.g. product passports, ecolabels)

Sustainable Products Initiative

Sustainable Products Initiative aimed at:

- **Extending product lifetime** (*durability, reparability, upgradability, counter premature obsolescence*)
- **Improving overall 'circularity'** (*remanufacturing, recyclability, recycled content, restrict single use*)
- **Reducing emissions, pollution and waste** (*chemicals, carbon/env footprint, efficiency, etc*)
- **More circular 'handling'** (*destruction unsold goods, product-as-a-service, reward sust. performance*)

Digitalisation as a key enabler: *digital product passport*, supported by *European Dataspace*

« **Sustainable products should be the norm, not the exception** »

The roadmap for the Sustainable Product Initiative is published::

<https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12567-Sustainable-Products-Initiative>

The feedback period for the inception impact assessment is until **16 November 2020**

Thank you!
